## **MTG attends the WODCON XXI Congress and Exhibition, introducing its latest solutions for the dredging market**

**The company introduces its MTG Systems DMet to ensure maximum reliability and productivity even in the most demanding applications**

**MTG has also announced that it has started to manufacture its own cutter-heads with the latest equipment to assemble and weld ensuring the highest quality**

MTG is represented on the World Dredging Congress and Exhibition introducing its MTG Systems DMet. It is a G.E.T system ideal for cutter and hopper dredgers, which improves productivity and increases protection, even in demanding applications such as hard rock. This system excels in durability, thanks to its self-sharpening tooth design with a higher wear material ratio. The system also includes a hammerless locking technology, MTG Twist, which provides a quick, easy and safe tooth replacement.

With a range of teeth with optional use of inserts and extra protection for the adapter, the MTG Systems DMet is the most robust and resistant on the market, thanks to the stabilization in all load directions. The tooth-adapter fitting system contact surfaces are perpendicular to the direction of the main forces, allowing better load distribution and reducing plastic deformation of the fitting system.

MTG's participation on Wodcon XXI is a demonstration of its growth and its strong commitment in the dredging market. In the words of Ana Cabezas, Key Account Manager, Dredge, "*We are growing very fast the field of dredging since we started our dredging division in 2013 and we have consolidated as a solid alternative in the segment of high quality cutting systems. Currently, we are even manufacturing our own cutter head, thanks to our new facilities, equipped with the latest technology and equipment. Therefore, we consider this congress as the place to be, thanks to its international focus among the dredging community worldwide.*"

MTG offers solutions for different dredging equipment: cutter dredgers, hopper dredgers, backhoes and clamshells. Along with the patented DMet System, MTG also offers a wide range of products both proprietary and adaptable to the major systems on the market.

MTG is showing all these innovations at booth 52 in the Wodcon XXI Congress and Exhibition, held at the Hyatt Regency in Miami.

### **About MTG**

**MTG is an international company specializing in the use of state-of-the-art technology for the design and production of innovative GET systems for earth moving machinery.**

**Present in more than 60 countries worldwide, it operates through more than 300 distributors for the mining and construction business units and has a specialized team of direct sales to the dredging market, working with major Belgian, Dutch and Asian companies.**

**Family owned and with two main offices (Barcelona and Houston), MTG guarantees the highest standards of service to all its customers.**
