

## UMI Ships TrashCat to Malaysia OCTOBER 8, 2015

**MALAYSIA** – The UMI division of Liquid Waste Technology (LWT) recently shipped a TrashCat MS8-1500A marine skimmer to Malaysia. This machine will be used to keep portions of the Klang River free from floating debris such as plastic bottles, wood, and trash.

*Trash and other debris floating in the Klang River*

UMI (United Marine International) was excited to host a large group of Malaysian government workers who came to the local manufacturing plant for an extended amount of training - both in the classroom and on the water. This group was made up of both maintenance technicians and operators.

The TrashCat MS8-1500A is a highly transportable, easily deployed trash skimming vessel capable of meeting today's environmental cleanup requirements.

The TrashCat MS8-1500A is self-propelled via its 99 HP (74 kW) industrial diesel engine, which also powers its trash collecting ability. The unit's storage capacity is rated at 1500 lbs (680 kg) and features self-unloading capability.
